

Drink tips

Americano:

Americano coffee is made of one third espresso & two thirds hot water.

Fact: The term Americano was first used by the Italians during World War 2. The American soldiers found the Italian espresso too strong and diluted it with hot water – hence the term Americano.

1. First you will need to add the hot water.
2. Place your cup underneath the steam arm, which is located alongside the capsule holder.
3. Rotate the black steam knob on the side of the machine until water flows from the steam arm.
4. When you two thirds fill your cup with hot water close the steam knob. (Add more or less water depending on the desired strength of your Americano)

5. Insert an espresso capsule into the capsule holder.
6. Place the cup of hot water in the product dispense area.
7. Press the espresso product button.
8. *Hint: Need a stronger coffee to wake you up – try using a second capsule.*
